

Divlje rijeke

BOSNE I HERCEGOVINE

Kruščica

Bosna i Hercegovina je jedna od posljednjih zemalja u Evropi koja ima kvalitetnu prirodnu vodu za piće što se izgradnjom hidroelektrana drastično mijenja i ugrožava pravo naših građana na čistu i zdravu vodu za piće. Razvoj turizma, tradicionalnih i komplementarnih djelatnosti uz naše rijeke može generisati više raznovrsnih radnih mjesta i ostvariti veći razvoj lokalnih zajednica, nego što bi to realno bilo moguće kroz razvoj hidroenergetskih projekata. Ovdje su predstavljene samo neke od rijeka za koje se borimo.

Bosnia and Herzegovina is one of the last countries in Europe with good quality natural drinking water, which is changing drastically due to hydro power plants construction which is endangering our citizens' rights to clean and healthy drinking water. The development of tourism, traditional and complementary activities along our rivers can create more diverse jobs and achieve greater development of local communities than it would be realistically possible through the hydro power projects development. In this publication we present only few of the rivers for which we fight.

TRANSITION

Ministry of Foreign Affairs of the Czech Republic

Trenutno se vode mnoge borbe protiv hidroelektrana u Bosni i Hercegovini, a najvažniju ulogu ima lokalno stanovništvo koje direktno zavisi od ovih rijeka i koje je spremno da ih brani svim sredstvima. Rijeke su zajedničko dobro, a ne vlasništvo pojedinaca. Pogodovanje vlasti privatnim interesima nad javnim mora se zaustaviti.

There are currently many battles against hydro power plants in Bosnia and Herzegovina, and the local population, which is directly dependent on these rivers, is most important and ready to defend them by all means. Rivers are a common good, not the property of individuals. Governments discriminate public interest in favor of private interests and this must be stopped.
