**Subject: Conclusions of the Natura 2000 biogeographical seminar for the
Czech Republic (24-25 March 2011, Průhonice)**

Dear Ms. Zíková,

The Commission is currently proceeding with an update of its conclusions of the biogeographical seminars and has established, per Member State, a draft list of species and habitat types for which additional SCI site designations are still necessary, and/or for which there remains a need for corrections to the Standard Data forms of existing SCIs.

Attached you will find the updated conclusions for the Czech Republic, which were established following the biogeographical seminar which took place in Průhonice on 24-25 March 2011.

As stated at the closure of the seminar, I am asking you herewith to update the national Natura 2000 database with the necessary data corrections, and to fill the remaining gaps of the Czech part of the Natura 2000 network of sites as soon as possible.

We are currently planning to publish the updated conclusions per Member State on the public Natura 2000 CIRCA site, in November or December 2011:
(http://circa.europa.eu/Public/irc/env/natura_2000/home).

If you have any comments to the attached document, please send them by e-mail to Mr. Frank Vassen, frank.vassen@ec.europa.eu with copy to Mr. Otars Opermanis at the European Topic Centre for Biological Diversity: otars.opermanis@mnhn.fr

Thank you very much in advance for your cooperation.

Yours sincerely,

Stefan LEINER
Head of Unit
